40/100 GBit ready FO cabling infrastructure

- optimized OPEX through easy migration from duplex to parallel optical channels
- ceramic ferrule technology for exceptionally high port density
- longevity and real investment protection
- excellent scalability

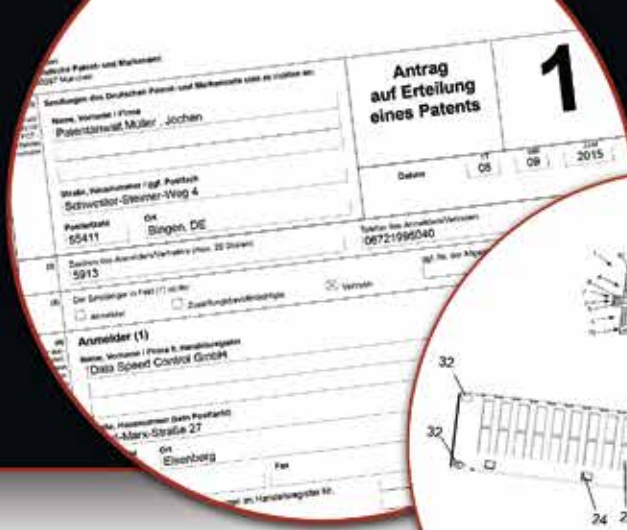

Two DCX including image of the port cards - by URM or LC - in one RACK

High density solution based on LC

Speed of future

patented high density solutions based on LC or URM

extremely high packing density, 192 fibre / 96 ports individually connectable in 2 HU - 19" including cable management in **URM**

extremely high packing density, 192 fibre / 96 ports individually connectable in 2 HU - 19" including cable management in **LC**

- fully graphical server client based documentation tool
- devices, racks and environment were displayed 1:1 on screen
- climatic housing for data centre equipment, independent from there dimensions and size
